3	2	4	4
independent full-stack products	payment rails: M-Pesa & Paystack	Claude-powered agents in PropFlow	industry placements & internships

PROFILE

Full-stack developer who designs, builds and runs independent software products across sports technology, market validation and property management. Owns the full path from data modelling and API design to responsive interfaces, payments and deployment. Hands-on with React, Next.js, TypeScript, Node.js and PostgreSQL, with M-Pesa Daraja and Paystack payment flows and Claude-powered workflow automation built into each product. Backed by placements in telecom networks, enterprise databases and hospitality ERP systems, and fluent in English, Kiswahili and French.

CORE TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, Radix UI, Zustand, React Query
Backend & data	Node.js, Express, REST APIs, PostgreSQL, MySQL, Supabase, Prisma ORM, SQL, schema design and migrations
Integrations	Paystack, M-Pesa Daraja (STK Push), signed webhooks, Socket.IO, Redis, Bull
AI & automation	Claude API, multi-agent workflows, human-review escalation, audit trails; OCI AI Foundations
Delivery & quality	Git, Vercel, Docker Compose, Nginx, Vitest, Node.js test runner, Linux
Networks & systems	IP addressing, VLANs, routing and switching, telecom pole and aerial cable installation, hospitality ERP deployment
Also familiar with	Python, Java, C++, C, Dart
Languages	English (native), Kiswahili (native), French (B2)

SELECTED PROJECTS

FPL123 | Fantasy Football Platform — 2023 – Present
www.fpl123.live

Stack Next.js 16 · TypeScript · Supabase · Paystack · M-Pesa · Vercel

- **Product.** Built a fantasy-football platform spanning paid gameweek competitions, self-service league hosting and personalised team-analysis reports.
- **Data & automation.** Integrated FPL API data for manager verification, group allocation and standings; automated gameweek deadline and leaderboard refreshes with scheduled jobs.
- **Payments.** Implemented M-Pesa STK Push and Paystack checkout flows with payment verification, callbacks and access entitlements for entries, hosting passes and reports.
- **Optimisation.** Developed lineup optimisation and transfer-planning logic with downloadable PDF reports; added regression tests for legal formations, fixture handling and transfer constraints.
- **Operations.** Built a host console, public leaderboards, referral discounts and wallet credits, plus admin controls for pricing, entries, hosts and payouts.

PropFlow | Property Management SaaS & AI Workflows — 2025 – Present
Independent project

Stack Next.js · Express · PostgreSQL · Prisma · Claude · Redis · Socket.IO · Docker

- **Platform.** Built a multi-tenant application covering properties, units, tenants, leases, payment schedules, maintenance and viewings in an npm-workspaces monorepo.
- **Security.** Implemented organisation-scoped access, four user roles and JWT refresh-token rotation to keep teams and property portfolios separate.

- **AI agents.** Developed four agents for inquiries, maintenance, rent reminders and viewing scheduling, with shared Claude integration, audit trails and human-review escalation.
- **Infrastructure.** Connected real-time dashboard updates through Socket.IO and scheduled operational jobs through Redis/Bull; packaged services with Docker Compose and Nginx.

ValueRadar | Product Validation & Buyer Discovery 2025 – Present

Independent project

Stack Next.js 16 · TypeScript · Supabase · NextAuth · Claude · Paystack · M-Pesa · Recharts

- **Demand scoring.** Built a platform that turns structured buying decisions into a weighted demand score, helping creators assess interest, price sensitivity and potential buyers.
- **Discovery.** Designed niche-based discovery and a review-before-publishing workflow to encourage relevant feedback and address the initial shortage of reviews.
- **Monetisation.** Implemented paid buyer-contact unlocks and feature purchases with Paystack and M-Pesa; connected provider verification and signed webhooks to atomic database fulfilment.
- **AI & analytics.** Integrated Claude for listing improvements, pricing suggestions and demand-signal interpretation; built analytics views and admin controls for fees, users and revenue.

PROFESSIONAL EXPERIENCE

Hospitality Systems Intern
March – April 2025

YourApps & IDSnext · Nairobi, Kenya

- Assisted deployment and configuration of hospitality ERP modules covering front office, point of sale, finance and HR.
- Configured property-management-system connections to payment gateways and triaged client feedback into reliability fixes under senior engineer review.

Database & Employee Records Intern
July – August 2024

United Petroleum · Zanzibar, Tanzania

- Maintained and updated the employee records database, keeping personnel data accurate, consistent and complete.
- Ran SQL queries to retrieve, validate and reconcile records, and flagged duplicates and inconsistencies for correction.
- Prepared structured reports from employee data and applied data-handling and confidentiality practices to personnel information.

Network Engineering Intern
May – June 2024

Zantel · Zanzibar, Tanzania

- Assisted with network configuration on routers and switches, including IP addressing, VLAN segmentation and basic routing, following senior engineers' procedures.
- Supported outside-plant work: site surveys, telecom pole installation, aerial cable stringing and termination.
- Carried out connectivity checks and fault isolation to verify service after installation and configuration.

Service-Based Attachment
January – March 2020

Texas Cancer Center · Nairobi, Kenya

- Supported procurement, inventory control and electronic medical record keeping while following data-handling and compliance procedures.

EDUCATION & CERTIFICATION

B.Sc. Informatics & Computer Science
2018 – 2026

Strathmore University · Nairobi, Kenya · Degree conferred August 2026

Oracle Cloud Infrastructure AI Foundations Associate
2025

Oracle University · Foundations of machine learning, deep learning, large language models and OCI AI services

ADDITIONAL TECHNICAL EXPERIENCE

- **Waste Prediction Model.** Developed a Python/Flask application using a decision-tree model to forecast waste generation and categorisation.
- **Engineering practices.** Relational schema design, database migrations, role-based access control, Supabase row-level security, webhook processing, background jobs and API documentation. PropFlow includes Vitest tests for authentication utilities and agent behaviour.
